MANAGEMENT HOMERUN

Large Capacity Wire Management

This innovative tool-less wire management solution allows installers to efficiently and securely position homerun wires within the array footprint without having to re-invent the wheel on each project or settle for off-the-shelf accessories that need to be customized to each job. The double sided large capacity Clips snap onto clawFR Module Connectors and secure wires above the roof deck while still clearing the low end of the modules and Wind Deflectors. The dual channel design and elevated position above the roof allow for less DC loss than other raceways. The cover protects the wires from UV damage between rows or when exiting arrays on northern or southern array edges.
HOMERUN CLIP

Clips accommodate up to (24) #10 wires or (16) #8 wires.

HOMERUN COVER

UV resistant snap-on cover protects wires in exposed areas.

MANAGEMENT SUITE

ClawFR Wire Management Suite

PanelClaw's wire management suite simplifies the electrical installation for the entire clawFR platform. The accessories either snap on without hardware or quickly bolt to pre-punched mounting holes, offering a turn key solution that is fast to install and easy to standardize across all clawFR projects. Our Wire Clip installs tool-free, streamlining wire management underneath the modules. Wire Routers conveniently bolt to the clawFR Base and are used to protect string wiring from the elements when not shaded by the module. The MLPE bracket allows installers to position a variety of different electrical accessories at the ideal location for commissioning and O&M.
WIRE CLIP

The Clip snaps on to the clawFR Rail underneath the module and allows for up to 8 wires.

WIRE ROUTER

The Router bolts to the clawFR Base allowing installers to protect up to 4 string jumpers from the elements.

MLPE MOUNTING BRACKET

The MLPE Mounting Bracket secures these devices directly to the racking at the ideal location.
